

The number one birth defect in the United States is *Congenital Heart Defects*.

If you answered cerebral palsy, sickle cell disease, pediatric cancer, down syndrome, spina bifida, fetal alcohol syndrome, or any other common affliction other than CHD, you would be wrong. The fact is, **Congenital Heart Defects** are number one. It is proven that the earlier CHD is detected and treated, the more likely the affected child will survive.

It's My Heart is committed to advocating for and supporting those affected by Congenital Heart Defects. To learn more, visit itsmyheart.org.
